

Adani Power to set up vermicompost facilities

TIMES NEWS NETWORK

Ahmedabad: In order to safely dispose and manage fly ash, Adani Power Ltd has decided to set up environment-friendly vermicomposting unit at its power plants in Mundra, Maharashtra and Rajasthan.

The company has already carried out a pilot project at its Mundra plant.

The company recycles the fly ash by using it as a source for plant nutrients in agriculture in addition to its utilization in the production of cement concrete, construction of roads, bricks and structural filling.

“After the success of this pilot project in Mundra, we plan to replicate the same model at Tiroda in Maharashtra and Kawai in Rajasthan,” said Vineet Jain, CEO, Adani Power.

Adani Power has also commissioned a 40 MW solar power plant in Kutch district, Gujarat. Mundra plant is also the world's first coal-fired power project to receive carbon credits. It is generating about 1.8 million certified emission reductions each year.
